Nikolas Badminton – The Future of...

Education

Nikolas look at how the education sector must change, and how that change will mean we encourage our children to be radical freethinkers.

Media & Advertising

Nikolas will talk about how media and advertising is changing at an exponential pace and is leaving agencies, marketing professionals, and brands with some tough decisions to make. Disruption through channel diversity, platform hijacking, and immersive experiences. The talk will cover; the ages of advertising, innovation, the new channel mix and the future of consumer connection, immersion, and brand affinity.

Farming

Now, more than ever, we are seeing more innovation delivered across many industries. In the next few years, there will be huge opportunities to look at, and implement, technology innovations that advance the business of farming. Nikolas will touch on trends in key areas including the Internet of Agricultural Things (IofAT), apps to help with business management, access to design, engineering and admin resources online, open data, virtual and augmented reality, wearables and implantables, vertical and underground farming, automation in the field (robots), and quantified cattle.

Energy and Fuel

This will be a stimulating and thought-provoking talk on how we operated today, what innovations are coming to change supply and demand, and how we will progress in the modern world over time.

HR

Why will automation change the HR profession forever? True disruption will come from unbiased computers and artificial intelligence.

Automotive

Cars are hot news these days and the industry is at an inflection point. From self-driving to electric vehicles that upgrade automatically without recall, from the Internet of Cars to the challenges of changing city infrastructures, we are seeing innovation disrupt one of the stalwart industries of the world. This evening presents some opinions and kick starts the discussion.
